

Are you aware that the average computer keyboard is a haven for germs?

The average computer keyboard harbours more bacteria than a common toilet!

Studies have shown that there are more than 3000 bacteria per 6.45cm² of a keyboard's surface, including multiple types of drug resistant bacterial strains.

MRSA can present a hidden danger in hospital keyboards.

Results of a study done in USA found that the bacterium methicillin-resistant staphylococcus aureus (MRSA), which can cause harmful skin infections, is able to survive on computer keyboards and keyboard covers for prolonged periods of time and is transferable to users' hands. Gary A. Noskin, MD, an infectious disease specialist, led the study for Northwestern Memorial Hospital in Chicago, where he specifically studied hospital environments. He found that growths of MRSA were evident on keyboards and keyboard covers 24 hours after contamination.

What are "SteriClick Antimicrobial Computer Peripherals"?

Antimicrobial computer peripherals are the keyboard and mouse parts of the computer, covered in a hard wearing but soft to touch silicon skin impregnated with nano silver particles which destroy microbes (bacteria, fungi etc.) which come into contact with the silicon surface. The cover makes the peripherals water proof and easy to clean, further reducing potential microbial contamination.

SteriClick Key Features

Hygienic, Antimicrobial, IP68 Dust and Waterproof computer keyboards & Mouse

IP68 Waterproof & Dustproof

Fully sealed Washable Medical Grade Keyboard and Mouse- Dishwasher Safe
Cleans with all common medical cleaning solutions certified for medical usage.

Antimicrobial Protection

Keyboard & Mouse surface have unique antimicrobial coating of nano silver particles which destroy microbes (bacteria, fungi etc.) which come into contact with the silicon surface.

Infection Control

Hygienic, Antimicrobial, IP68 Dust and Waterproof computer peripherals used in Hospitals, Dental Clinics, Medical Clinics Pathologies, Laboratories, Cleanrooms in various Industries and Computer Labs of various educational institutions

SteriClick Medical and industrial keyboards and mouse

IP68 water and dust protection as well as a unique antimicrobial coating on both the keyboard, mouse and its cable preventing colonisation by microorganisms. All products are capable of being cleaned with standard hospital grade cleaning supplies certified for medical use. The brightness adjustable backlight ensures comfortable and ergonomic use in all light conditions. Available in both Black or White.

2.4Ghz Wireless version and wireless touchpad versions available.
